

# **Equine Science looking forward *to match the challenge of a growing industry***

**W. Martin-Rosset**

**National Institute of Agricultural Sciences**

**France**

# ***Plan***

- **Key challenges for equine population in the world**
- **Key challenges for developed countries**
- **Main achievements to meet these challenges**
- **New prospects**
- **Main issues / challenges**

# Equine population in the world (millions) and key challenges

# Developed countries: **EUROPE**

## Equids industry : indicators

15 WEC

4.3 millions horses	$\xrightarrow{+12 \text{ CEEC}}$	7 millions
3.5 millions Ha	$\longrightarrow$	> 3.5 millions
0.2 full time people	$\longrightarrow$	> 0.2 people
6.2 millions riders	$\longrightarrow$	> 6.2 millions

 Demand 

WEC: Western European Countries

CEEC: Central-Eastern European Countries

**Developed countries: EUROPE**

## **Equids industry: activities**

- Races
- Sports
- Leisure
- Hobby farming

**Main activities**

- Social cultural events
- Agritourism
- Medical therapy
- Social rehabilitation

**New activities**

- Meat or milk

**Niche activities**

**1st pillar  
CAP**

# Developed countries: **EUROPE**

## Equids industry: organization of the chain

Breeders

**Production**

Studbooks  
Breeding associations  
Private companies  
Racing societies

Trainers  
Breakers

**Transformation**

Professional associations  
Private companies

Owners  
Riders  
Riding schools

**End-users**

Professional associations  
Sport federations  
Racing societies  
Event organization  
Technology companies

Citizen

**Society**

Individual Or Associations

A background image showing a horse race in progress. Several horses and jockeys are visible on a green track, with a blurred crowd in the background. The image is framed by a curved orange border.

Developed countries: **EUROPE**

**Equids industry / multifunctionality**

**Utilization of the territories**

**Grass** = grazing 6 to 10 months

+

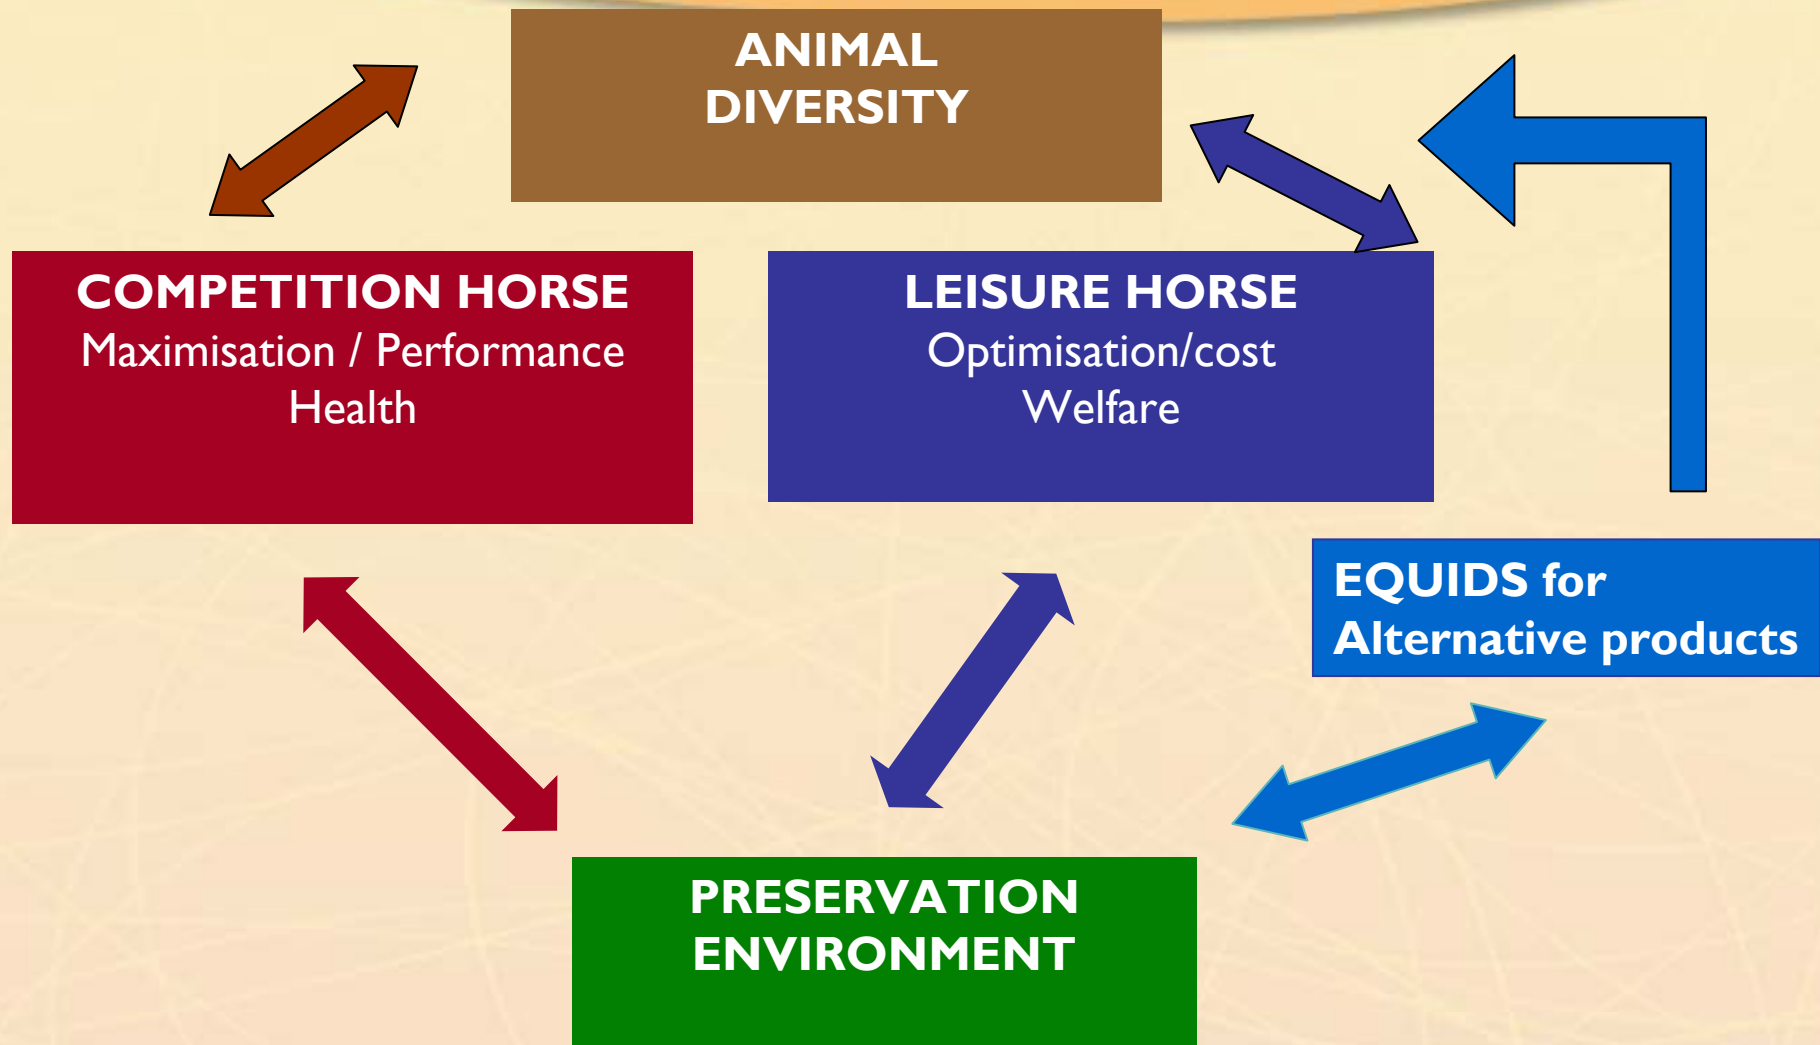

**Forages** = feeding 30 to 70 percent of total nutritional requirements

Developed countries: **EUROPE**

# Key challenges

# *Main achievements* **= RE PRODUCTION**

**Management of Ovarian cycle**

**Artificial insemination**

Light  
Hormones  
Nutrition

**One foal / mare / year  
Right time / year**

Methods & technology  
Semen conservation

Progesterone

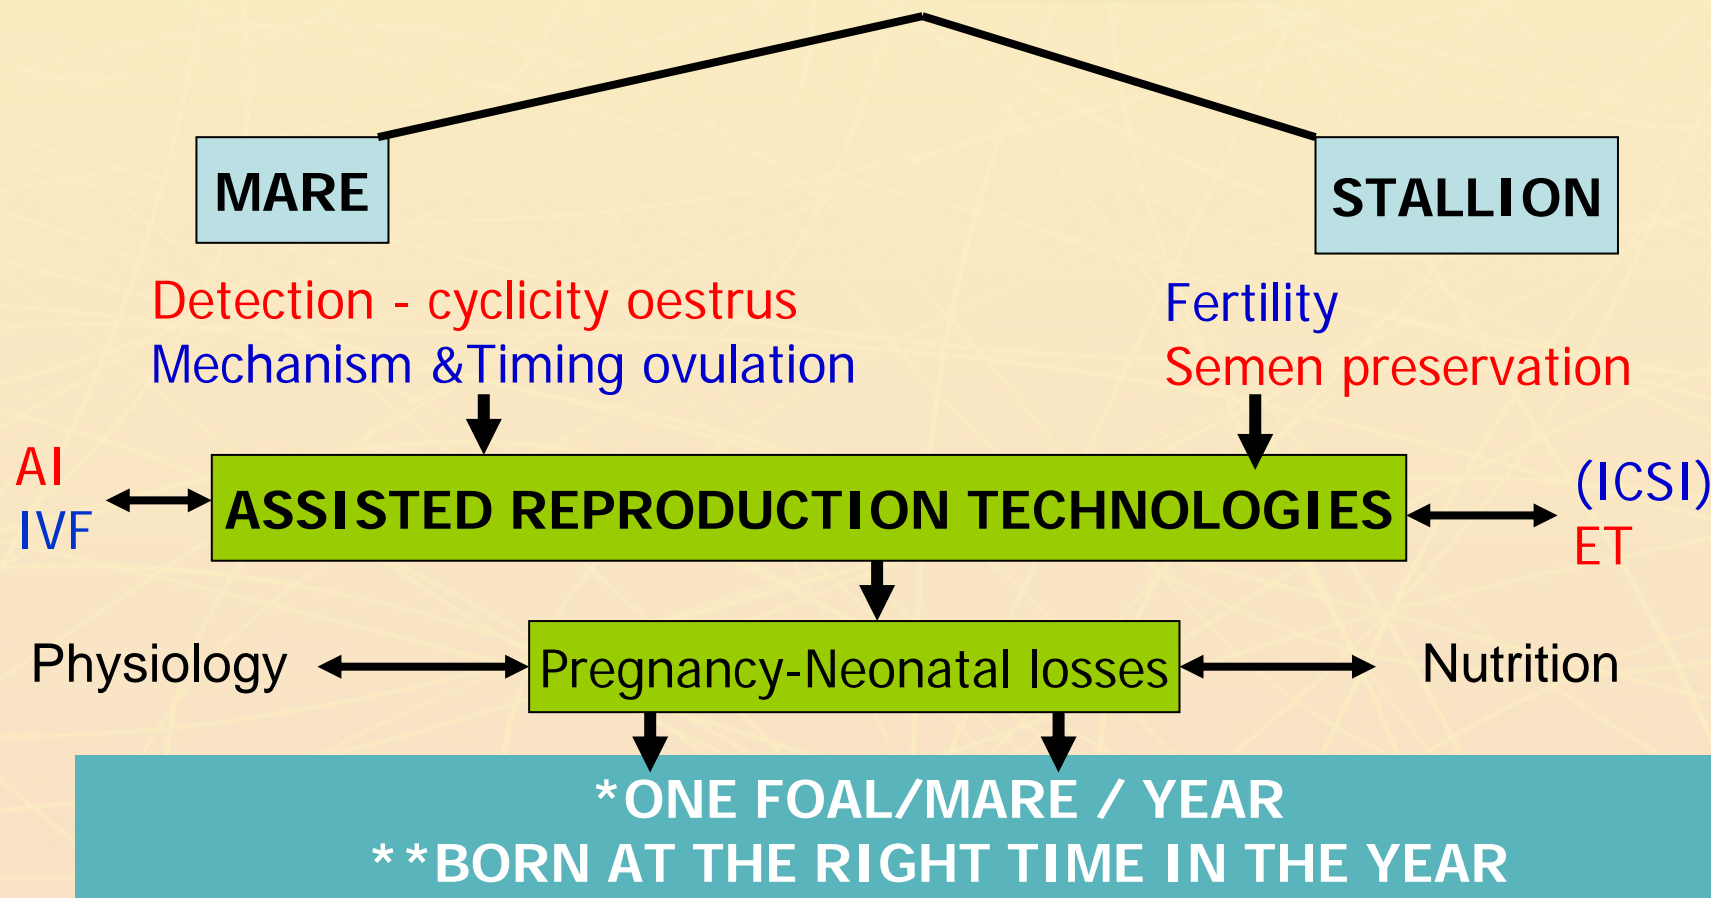

Echography

**Controlled  
natural mating**

**Pregnancy diagnosis**

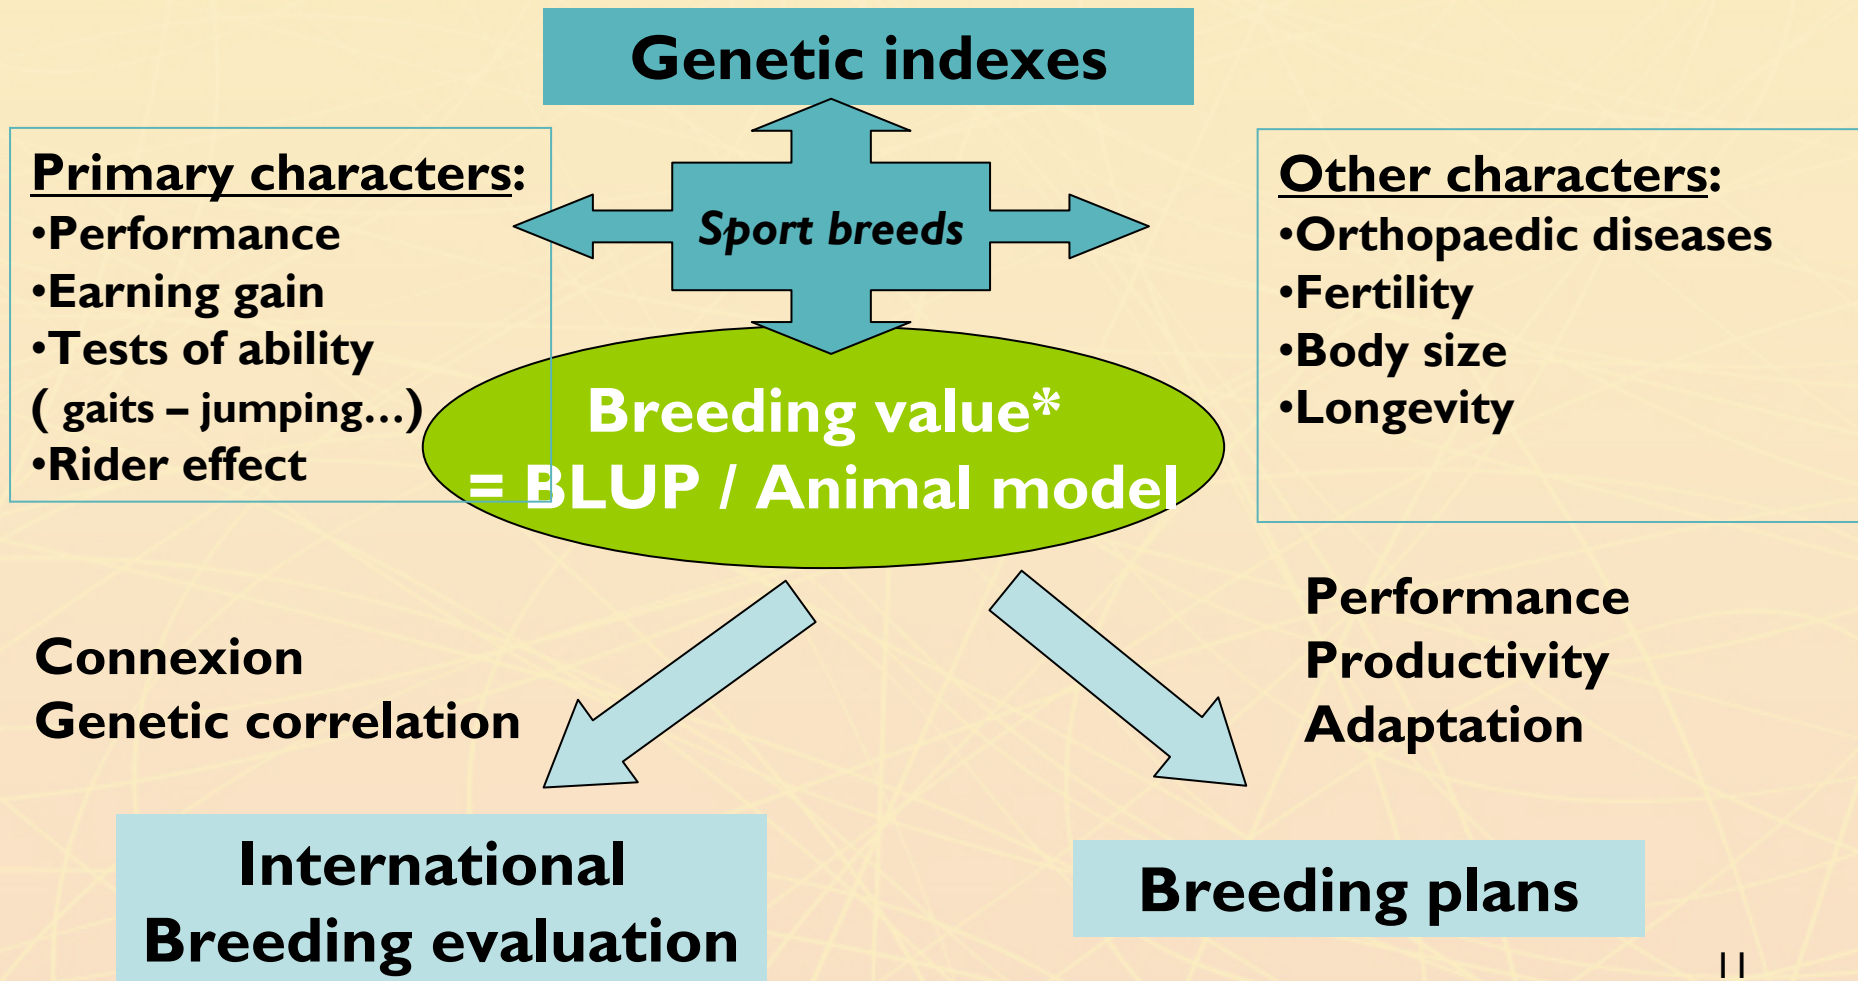

# New prospects = RE PRODUCTION

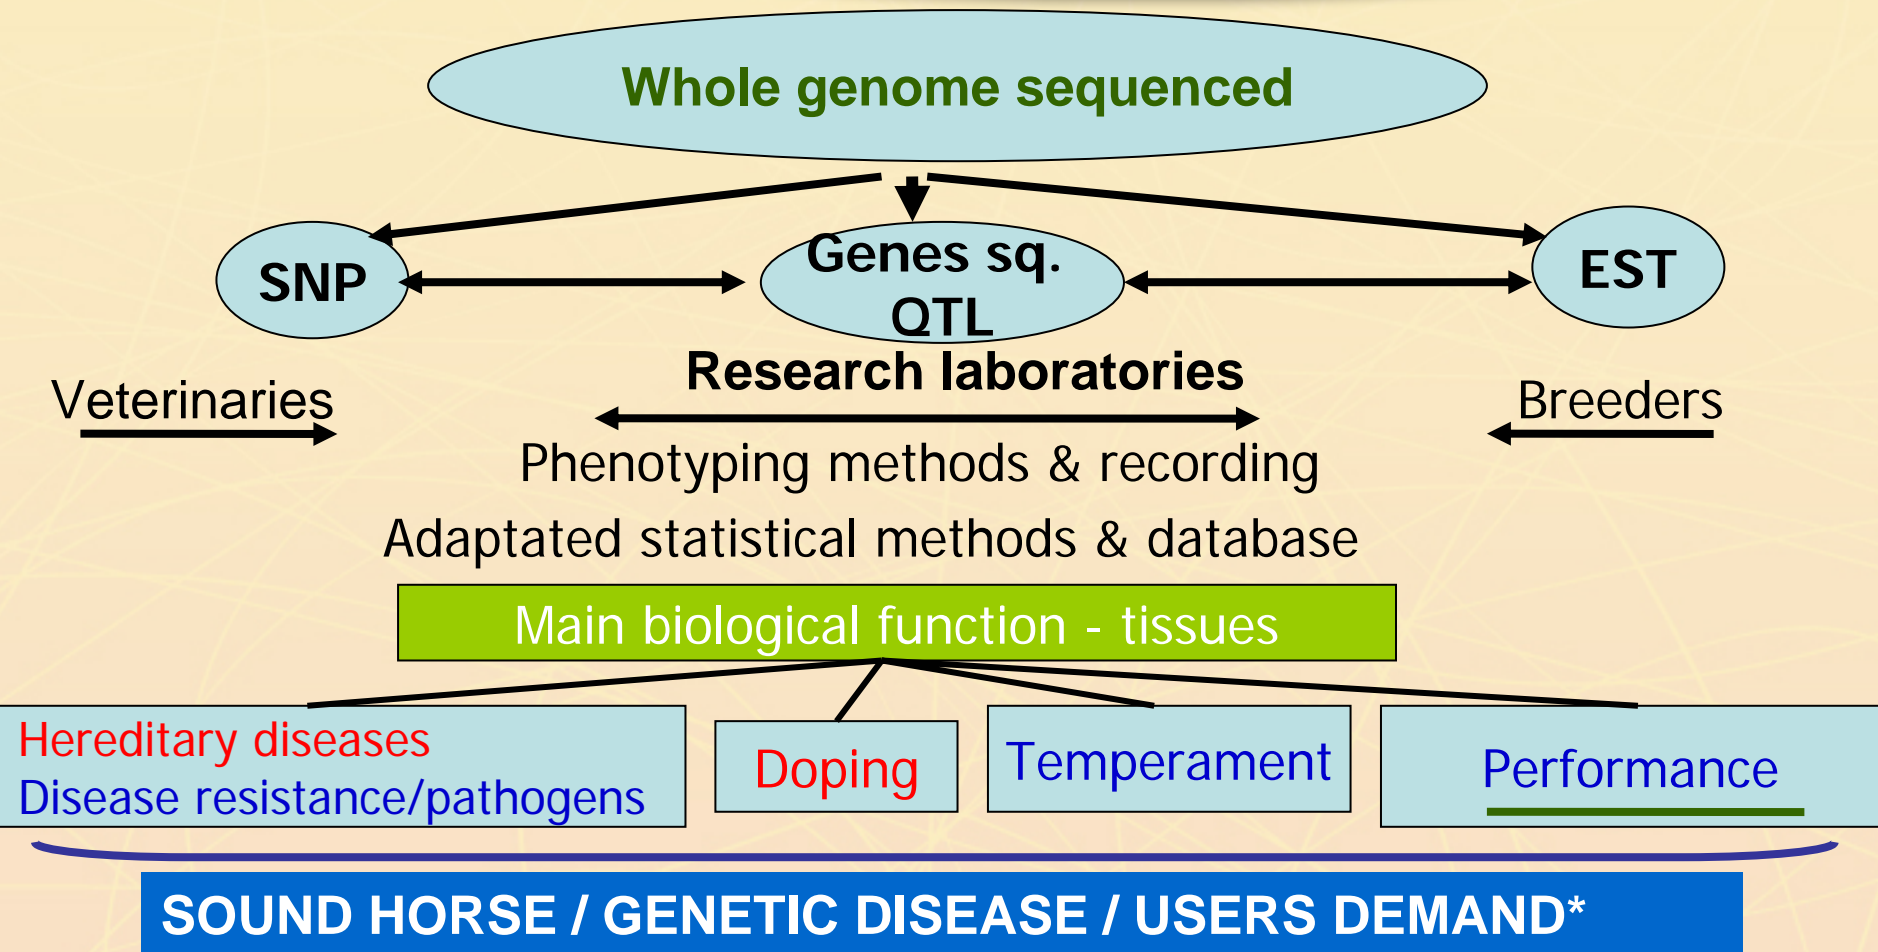

# Main achievements =GENETICS & BREEDING

# New prospects = GENOMICS & BREEDING

# New prospects =GENOMICS & BREEDING

Large  
population

## INBREEDING EVALUATION AND MANAGEMENT

Race breeds

Sports breeds

Diversity

Breeds improved  
by Arab only

Warmblood

Coldblood

Pony

Donkey

Small  
population

## PRESERVATION

Key  
challenges

Phenotyping: *expertise – recording*  
Genotyping: *identification – comparison*  
Reproduction: *AI - ET*

INBREEDING  
EVALUATION

# **Main achievements = NUTRITION**

## **Nutrients requirements**

**New concepts for evaluating the  
nutritive value of feedstuffs**

### **ENERGY**

**DE system**

**NRC (1978 – 1989 – 2007)**

**NE system**

**INRA (1984 – 1990 – 2010)**

### **NITROGEN**

**CP system**

**NRC (1978 – 1989 – 2007)**

**MADC system**

**INRA (1984 – 1990 – 2010)**

# **Main achievements** = **NUTRITION**

## **Nutrients requirements**

### Energy value of feeds

**NRC**

**GE**

**DE**

**ME**

**NE**

Determination

Digestibility trials

= GE x dE

Digestion trials

= DE x ME / DE

Indirect calorimetry

NE = ME x **Kmc**

**INRA**

# *Main achievements* = NUTRITION

## *Nutrients requirements*

### Nitrogen value of feeds

**NRC**

**CP**

**DCP**

**MADC\***  
~AA

**Determination**

Digestibility trials

$$DCP = f( CP \pm CW)$$

Digestion trials

$$MADC = f( DCP \times K)$$

**INRA**

**\*MADC = HDCP= Horse Digestible Crude Protein = Amino Acids**

# **Main achievements = NUTRITION**

## **Nutrients requirements**

### **Prediction of energy & nitrogen value**

**NRC**

**Feeds composition Tables**

**INRA**

**Feeds composition Tables  
and/or**

**NE = f(Chemical composition ± Digestible components)**

**MADC = f(Chemical composition ± Digestible Crude protein)**

**- Forages** : graminea / Legumes .....Equations 1 to 8

**-Concentrates**: ingredients / compound feeds ...Equations 9 to 18

**Set  
of**

# New prospects

# = NUTRITION

## Nutrients requirements

INRA

**NUTRITIVE VALUE OF FEEDS:**  
**Nitrogen**

### MADC System

$$\text{MADC} = \left[ \begin{array}{l} \text{AA from Small intestine for host requirement} \\ + \\ \text{N}_{\mu} \text{ microbial synthesis in large intestine} \end{array} \right]$$

### Nitrogen Requirements

	ANIMAL		ECOSYSTEM
Total requirements	=	Host	+ Bacteria
		Small intestine = Ideal protein ?	Large Intestine = To be evaluated...

# News prospects = NUTRITION

## Nutrients requirements

### INTAKE

**\*System for predicting intake**

# ***News prospects* = NUTRITION**

## ***Nutrients requirements***

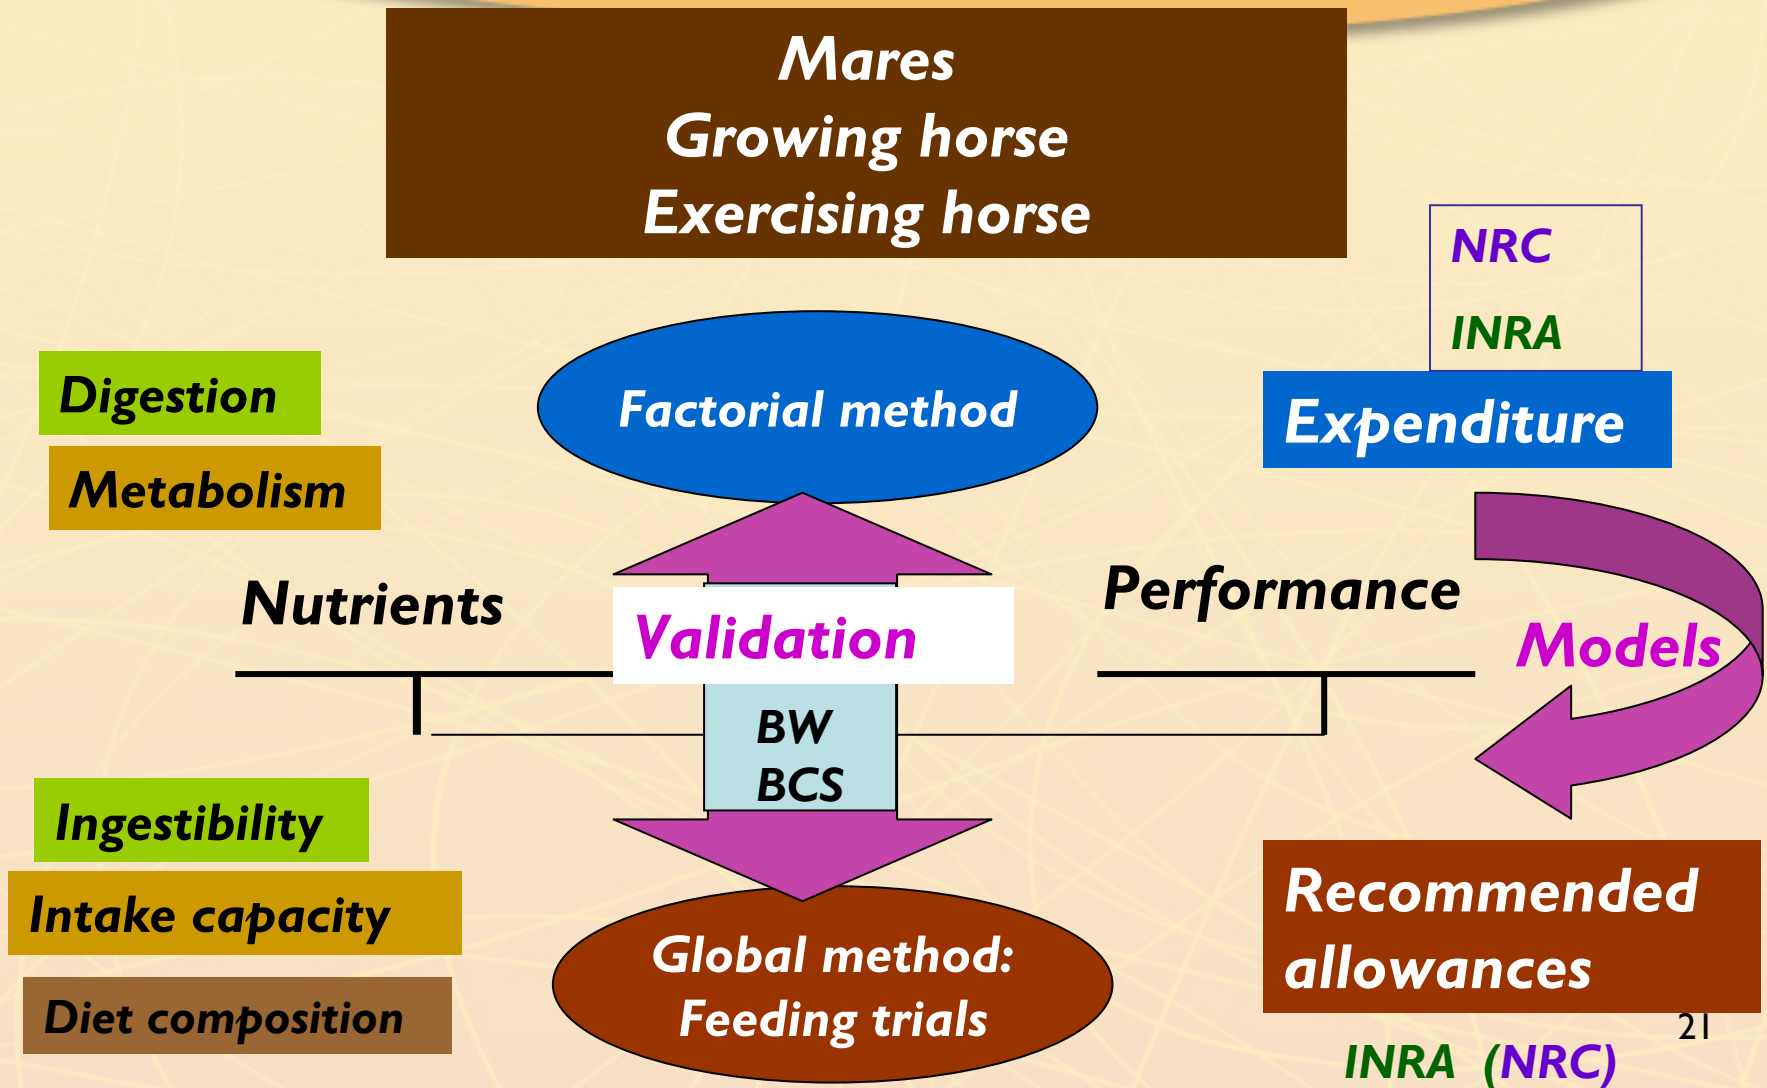

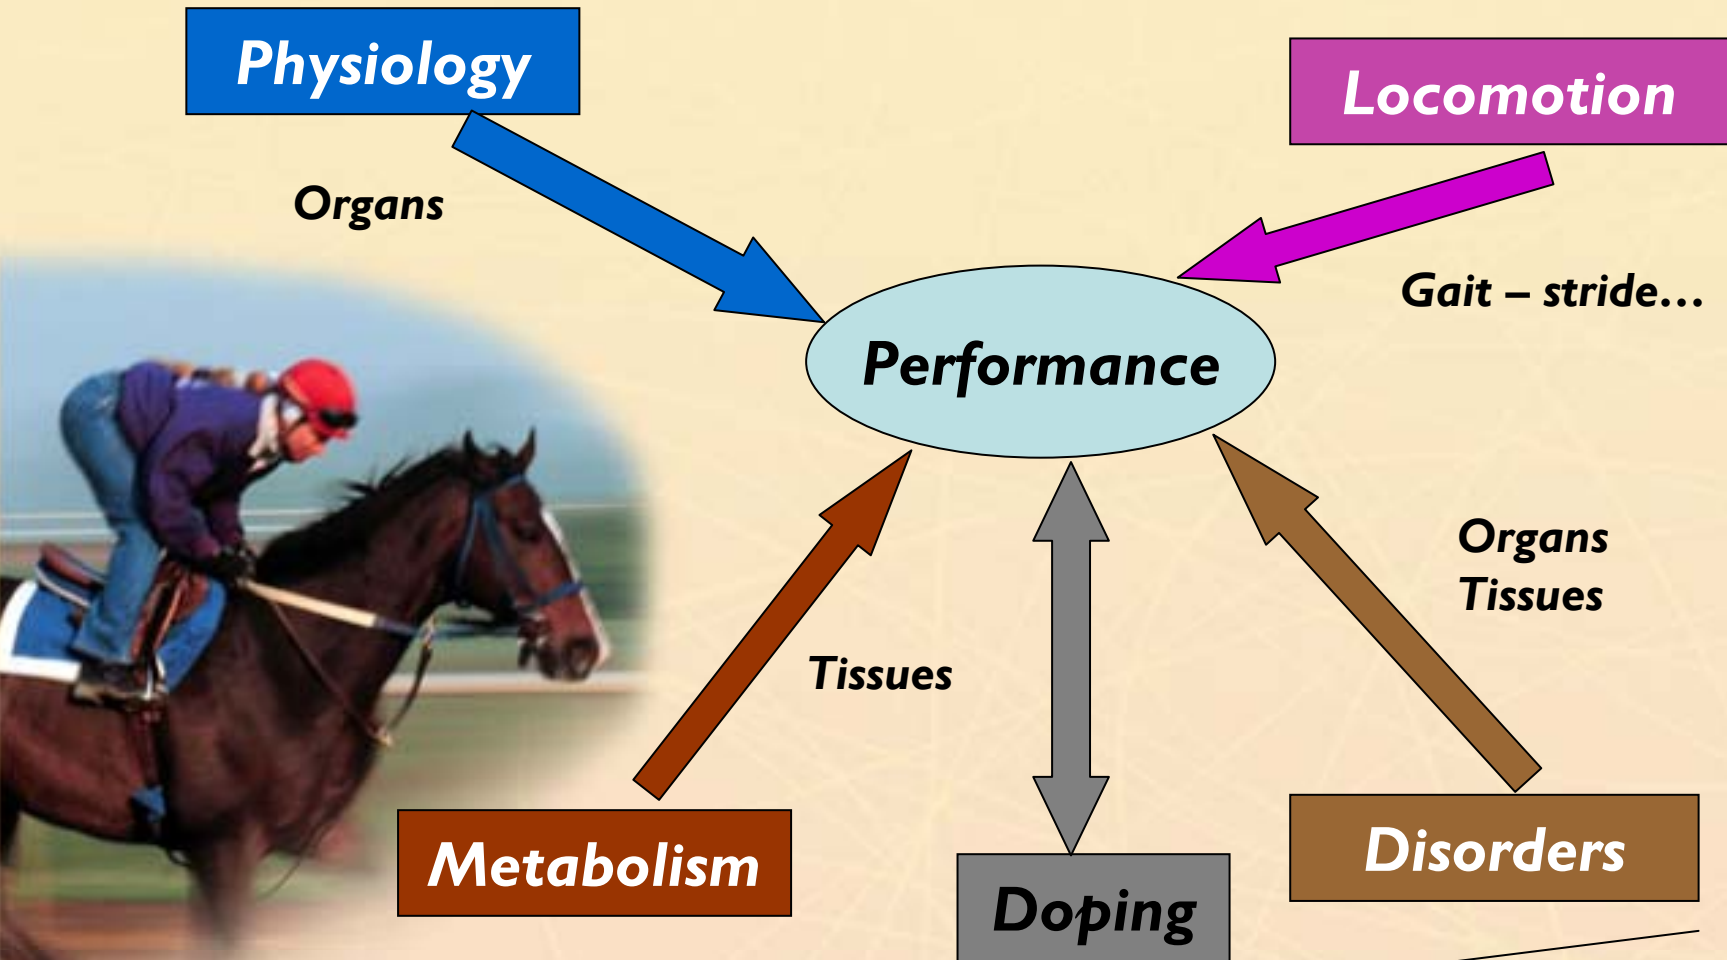

# Main achievements = NUTRITION

## Nutrients requirements

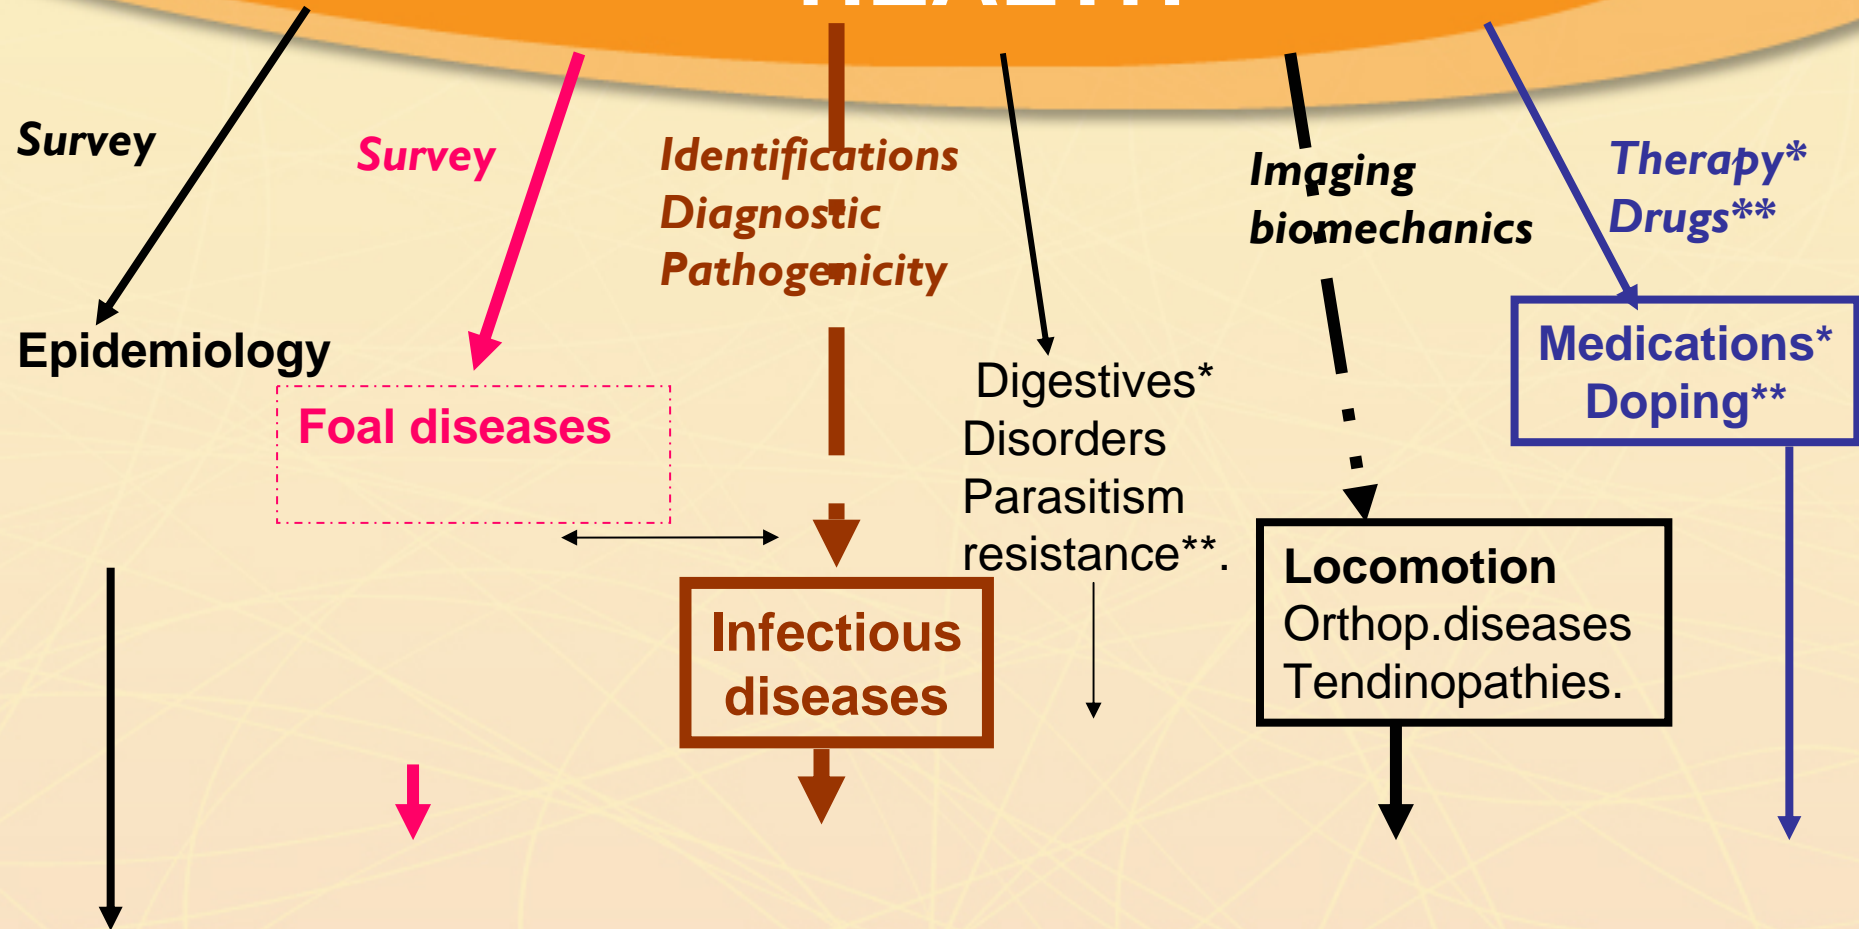

# Main achievements & News prospects =SPORTS MEDECINE

# Main achievements

## = HEALTH

**\*Healthy horse / healthy environment**

# New prospects

## = HEALTH

# **Main achievements = BEHAVIOUR & WELFARE**

**\*Horses: fit well / competition or leisure need**

***Behaviour profile***

***Temperament***

***Behaviour***

***Welfare***

***Learning ability***

***Age  
Management***

# New prospects = **BEHAVIOUR & WELFARE**

**Horses: well adapted / competition or leisure need**

*Behaviour profile*

*Learning ability*

**Human impact**

**Environmental factors**

**Health**

**Life conditions**

**Training  
Competing  
Transportation**

**Working conditions**

**\*Horses well managed / Raising - Riding**

# New prospects = Genetics - Breeding - Behaviour

## Quantitative genetics and Behaviour characteristics

### BREEDING PROGRAMME

#### Traits:

Temperament\*\*  
Behaviour profile

#### Key challenges:

- Performance... *Competition*
- Easy riding..... *Leisure*

#### Exp. studies:

Criteria, tests  
Heritability /  
Husbandry & Riding  
systems

#### Expertise

Ethology  
Training  
Riding

#### Recording data:

Testing stallion  
Testing Young horse

# News prospects = NUTRITION x SPORT MEDECINE

## Exercising horse

Requirements

↔ Recommended allowances

•Races

gallop – trot

•Sports

endurance – jumping – eventing

Feeding trials

Training  
Programme

Body reserves

Metabolism

Endocrine regulation

Exercise

Experiments

coupling

Nutrition

Sports medicine

Performance

# New prospects = ENVIRONMENT

**Wastage**

**Plant diversity**

- To optimize nutrients intake = “natural feeding”
- To preserve plants species/ natural zone

**Global heating ??**

# Main achievements & New prospects Technical & Socio economic evaluation of the chain components

## Sectors

- *Actors*
- *Products*
- *Structure*

Challenge  
Market dynamic

## Structures

- *Production*
- *Utilisation*

Technical economic  
indicators  
Data / network  
Modelling of data  
Tools for decision

## Territories Activities:

- *Role*
- *Practices*

Utilization  
territories

## Jobs Employment

- *Identification*
- *Evolution*

Dynamics of the  
systems

**Public policy / Country - European policy ( CAP)**

A horizontal banner at the top of the slide features a background image of a horse race. Several horses and jockeys are depicted in mid-stride on a green track. The banner has a repeating pattern of text in the background: "OIVRC R6" and "6/11/".

***Developed countries:* EUROPE**

# **Main issues / challenge**

***Equines have or should have  
a farm animal status***

Developed countries: **EUROPE**

# Main issues / challenge

## \*EU NETWORK

- Across scientific disciplines
- Interactions with Equine industry
- Across all the countries

**Knowledge  
Technology  
Funding**

### **EAAP – Horse Commission**

- 5 Working groups: *Breeding-Nutrition-Behaviour & Welfare...*
- Workshops/seminars: *Interstallion/ Equine nutrition / Behaviour...*
- Connections with WBFSH – ICAR

**= Breeding evaluation**  **Comparability/countries**

- Connections with Feeds industry

**= Nutritional systems**  **Harmonisation/ countries**

- Horse network website: *EAAP Gen. Secretariat in Rome*

**Developed countries: EUROPE**

# Main issues / challenge

## EU NETWORK

**\*HIGHER EDUCATION** ↔ **EAAP Horse commission  
(working group)**

- European Master of Equine sciences
- Extension service

## TRANSFERT OF TECHNOLOGY

- To CEEC namely : to secure , develop equids population
- To all EU countries: to manage adequately innovation originated by research

**to promote equines production & utilization in EU and its competitiveness in the world**

Thank you for your attention
