1. Introduction: modernisation

➤ MODERNISATION:

- ↗ herd size
- ↗ milk production/cow
- ↗ specialisation, efficiency & automation (eg. AMS)
- housing type: tie stalls → cubicles (loose housing)

➤ **Does this improve cattle welfare?**

1. Introduction: modernisation – AW?

Advantages tie stalls

- ↘ fear of humans (Matiello et al '09)
- ↘ opportunities for -^{ve} soc. interactions
- ↘ lameness (Whitaker et al '00, Cook '04
↔ Gustafson '93, Matiello et al '09)
- ↗ claw health (Thyssen '87, Sogstad et al '05)
- ↘ dehorning

Advantages cubicles

- cleaner cows even without straw
- ↗ freedom to move & functional zones
- ↗ expression of natural behav. (Hultgren '03)
- ↗ opportunities for +^{ve} soc. interactions
- ↘ swellings & skin lesions (Matiello et al '09)
- ↗ lying comfort (Matiello et al '09)
- ↘ teat lesions (Regula et al '04)
- ↘ mastitis & ketosis (Bakken '81, Valde et al '97 ↔ Bakken et al '88, Hovinen et al '09)
- Overall welfare** (Ursinus et al '09, Simensen et al '10)

A lot of variation:

- management,
- pasture,
- lying mats,
- stocking density,...

1. Introduction: modernisation – AW?

- **Citizens:** intensification (“factory farming”) ~ poor welfare
pasture & straw ~ good welfare
- **Focus on productivity & efficiency**
 - ↘ time per animal (compensated by automation?)
 - selection for increased production (↘ longevity, ↗ health problems: leg disorders, mastitis, reproductive en metabolic disturbances)
- **Modern housing conditions:** increased attention for needs of cows?
(scaling-up, more knowledge, sticter norms and regulations, societal demands,...)

2. Methods

Is modernisation beneficial for dairy cattle welfare?

- IDEAL: ~~Historical~~ ↔ recent evaluations of overall AW

- ALTERNATIVE:

“traditional farms”

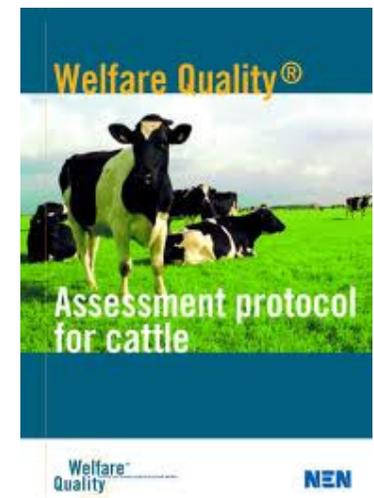

- tie stalls
- >20 yr

“modern farms”

- cubicles
- <20 yr

- Training of 6 observers: Welfare Quality® protocol

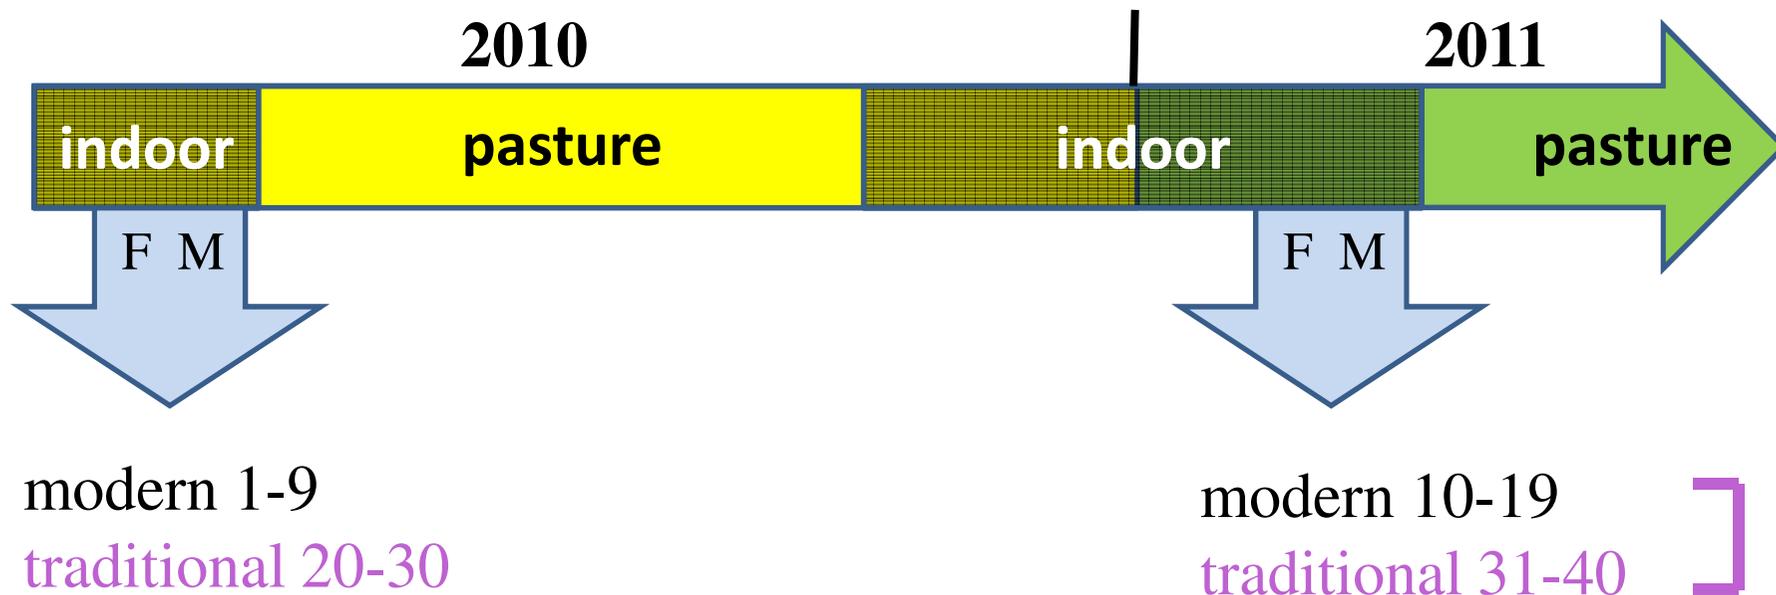

2. Methods: EU Welfare Quality ®

	Principle	Criteria	Indicators (dairy cattle)
Overall welfare category	Good feeding	1. Absence of prolonged hunger	BCS (% very lean animals)
		2. Absence of prolonged thirst	Availability & cleanliness water
	Good housing	3. Comfort around resting	Lying down duration; % collisions; on edge of lying area; cleanliness
		4. Thermal comfort	-
		5. Ease of movement	tethering; access to pasture
	Good health	6. Absence of injuries	Lameness; integument alterations
		7. Absence of disease	Respir./reprod./digestive diseases; SCC; mortality; distocia, Downer
		8. Absence of pain induced by management procedures	Mutilations (dehorning; tail docking; castration; use of anaesth./analg.)
		Apppr. behaviour	9. Expression of social behaviour
	10. Expression of other behaviours		Access to pasture
	11. Good human-animal relationship		Avoidance distance at feeding place
	12. Positive emotional state		QBA

2. Methods

- Welfare assessments on 19 **traditional** & 20 **moderns** farms compared with 2-sample T-test (SAS 4.1)
- Teams of 2 observers scored simultaneously but independently

3. Results: Overall welfare category

■ Not classified ■ Acceptable ■ Enhanced ■ Exceptional

3. Results: Criteria & Principles

Criteria		Modern	Traditional	Principles	Modern	Traditional
1	Absence of hunger	57	68	Good feeding	54	52
2	Absence of thirst	68	54			
3	Resting comfort	36	37	Good housing	58	34
5	Ease of movement	95	34			
6	Absence of injuries	37*	32*	Good health	29	33
7	Absence of disease	32	35			
8	Abs. pain (managt.)	39*	54*			
9	Expression of social behaviour	94	100	Appropriate behaviour	41	56
10	Expression of other behaviour	48	79			
11	Hum–anim. relation	39	55			
12	Pos. emotional state	52	50			

3. Results: Criteria & Indicators

Criteria		Modern	Traditional
1	Absence of hunger	57	68
2	Absence of thirst	68	54
3	Resting comfort	36	37
5	Ease of movement	95	34
6	Absence of injuries	37*	32*
7	Absence of disease	32	35
8	Abs. pain (managt.)	39*	54*
9	Expression of social behaviour	94	100
10	Expression of other behaviour	48	79
11	Hum–anim. relation	39	55
12	Pos. emotional state	52	50

RESOURCE-BASED

Days tethered ($\geq 18h$) /yr
Access to pasture:

-Days/yr :
- modern: 175
- traditional: 208
-Hours/day:
- modern: 7
- traditional: 16

% days per yr with $\geq 6h$ at pasture

3. Results: Criteria & Indicators

Criteria		Modern	Traditional
1	Absence of hunger	57	68
2	Absence of thirst	68	54
3	Resting comfort	36	37
5	Ease of movement	95	34
6	Absence of injuries	37*	32*
7	Absence of disease	32	35
8	Abs. pain (managt.)	39*	54*
9	Expression of social behaviour	94	100
10	Expression of other behaviour	48	79
11	Hum–anim. relation	39	55
12	Pos. emotional state	52	50

ANIMAL-BASED

Indicator	modern	tradition.
% lame	30*	25*
% overgrown claws	32	51
Hairless patches/cow	3.5*	5.5*

% disbudded/dehorned	96	62
----------------------	----	----

% of agonistic out of all social behaviour		
--	--	--

% cows that can be touched	29	39
----------------------------	----	----

4. Conclusions

- **Influence of modernisation on dairy cattle welfare seems:**
 - limited (overall welfare category)
 - mixed: ↗ ease of movement, (absence of injuries)
 ↘ behav., human-anim., (abs. pain by managt.)

- **Assumptions:**
 - WQ® protocol quantifies cattle welfare correctly:
 - integration is based on consensus (≠ scientific proof)
 - indicators are comparable between housing types

 - Samples of farms are representative for “traditional” and “modern” dairy farms
